Yamaha Outboard Won't Start Fuel Pump Failure Stalling - Yamaha Outboard Won't Start Fuel Pump Failure Stalling by Outboardst.com Outboard Specialty Tools 140,396 views 3 years ago 15 minutes - Diagnose and **repair**, a failed fuel pump. This motor was running poorly and stalling repeatedly. The first problem was that the ...

Intro

Lift pump failure happens on 2 stroke and 4 stroke motors. Number 1 sign of failure is the motor stalls/gets no fuel without pumping it in by hand

In 4 stroke EFI motors, the lift pump pushes fuel into the Vapor Separator Tank where it is collected and pumped under much higher pressure into the injector rail and injectors

In 2 stroke carbureted, the lift pump usually pushes fuel into the carburetor assembly

Anytime any motor has a running problem, always check the oil.

Oil and spark plugs can offer subtle yet important diagnostic clues

Squeezing the fuel primer. Mystery solved. Fuel is dumping out the back of the pump as opposed to getting pumped into the VST

Camshaft is in the wrong position interfering with the pump piston. Pump won't seat properly. Do not force it. Make sure that ignition is disabled

Flushing the oiling system is necessary I added a couple quarts of Yamaha 4M ran motor and then did complete oil and filter change

A quick little test run to circulate clean oil and next is a complete oil and filter change

Evacuating the motor oil using a manual vacuum pump
